

PRO 10 GUARDIAN/PRO 20 DIVER

 **Quicksave**
RESCUE EQUIPMENT

QUICKSAVE – Inventions that save lives

The Swedish company Quicksave AB is a developer and manufacturer of innovative rescue equipment in association with professional rescue departments. Quicksave's line of products are made by professionals for professionals for safer and more effective rescue operations in water.

The company was started by Åsa Magnusson who has won multiple awards for her inventions such as 'The European Female Inventor of the Year' and Bronze Price in 'Seoul International Invention Fair'.

Quicksave stands for quality, and all our products are entirely manufactured in Sweden and fulfill all the tough demands required from rescue equipment, both in Sweden, but by international standards as well.

ALL PRODUCTS
ARE MADE IN

Unique equipment for safer rescues

It works as a normal rescue buoy on the surface, but this one can be brought down below the water surface. It's easy to swim with and takes up little space.

RESCUE SERVICES, DALAMITT

QUICKSAVE PRO10 GUARDIAN

A professional solution developed for rescue departments, boat operators and everyone working with safety in or around oceans, lakes or swift water. PRO10 is small and lightweight but has the same buoyancy as a rescue buoy. It can be used to secure the victim on the surface as a regular rescue buoy, but can also be brought down below the surface down to 10 meters

of depth and lifts the victim to the surface facing upwards. PRO10 is easily reloaded after deployment and is ready to use in a few minutes. Thanks to its small size multiple units can be carried in the same belt, which allows for surface securing multiple victims. The PRO10 can be equipped with a reel making it not only a rescue device, but also a surface marker buoy.

PRO10 GUARDIAN

Made of strong and durable 380 μ nylon with anodized aluminium handles PRO10 is both lightweight and extremely durable. It has a lifting capacity of 60 newton and is easily inflated by pulling the handles when they are connected.

QUICKSAVE PRO 20 DIVER

PRO20 DIVER has twice the bouyancy compared to PRO10 and is especially designed for demanding rescue operations in water where the lifting capacity is the most important factor. PRO20 can just as PRO10 be used to secure the victim on the surface as a regular rescue buoy, but can also be brought down below the surface down to 20 meters of depth. When deployed it lifts

the victim to the surface facing upwards. PRO20 is easily reloaded after deployment and is ready to be used again in a few minutes. Thanks to its small size multiple units can be carried in the same belt, which allows for surface securing multiple victims or for lifting items that has sunken and needs to be recovered.

PRO20 DIVER

Made of strong and durable 380 μ nylon with anodized aluminium handles PRO20 is both lightweight and extremely durable. It has a lifting capacity of 120 newton and is equipped with a safety pressure valve ensuring a controlled ascent to the surface.

ACCESSORIES

PRO 10 GUARDIAN & PRO 20 DIVER

LEG HOLSTER
carried around the thigh
and can be attached to
the belt

WAISTE HOLSTER
small and discreet
holster carried around
the waist

PADDED WAIST BELT
With 5 D-rings and two
velcro straps on the back

CHEST HOLSTER
carried on the chest for
quick access

SURFACE MARKER BUOY
accessory which makes it possible to
use PRO 10 as a surface marker buoy

LAMP HOLSTER
can be attached to all
QS belts

THROWING LINE
15, 50 or 100 meter throwing
line made of durable materi-
als

SECURITY PIN
visual indicator showing when
the unit is ready to use

CO2 CYLINDER-PACK
available in packs of 5 or
10 cylinders

QS TEF-GEL
water resistant lubrica-
tor for all QS products
